

ENVIRONMENTAL COURSES

ACTIVITY 1:

Name of the activity: Los Arrecifes de Coral (The Coral Reef)

Short description of the activity: The principles aims of the activities are:

- 1) Present the different concept associated with the Coral Reef.
- 2) Identified the local regions of most Coral Reef.
- 3) Recognize the relevance and importance of coral reef as a marine ecosystem.
- 4) Identified the impact of human interactions within coral reef and develop and exchange of ideas to coral reef protection and conservation.

Target group: tourists , staff X, children: , local public: , students: ,
other target group:

Day Activity: _____

ACTIVITY 2:

Name of the activity: Los Mangles (Mangroves)

Short description of the activity:

- 1) Identify and describe the different types of mangrove that exist on the island.
- 2) Recognize the importance of mangroves.
- 3) To point out the way in which human beings negatively impact the mangroves.
- 4) Investigate community knowledge about mangrove ecosystems.
- 5) Propose alternatives for the conservation of mangroves.

Target group: tourists , staff X, children: , local public: , students: ,
other target group:

Day Activity: _____

ACTIVITY 3:

Name of the activity: Contamination

Short description of the activity:

- 1) Identify pollution problems on beaches
- 2) Identify anthropogenic activities (carried out by humans) that are affecting marine ecosystems

- 3) Examine the current situation in which marine ecosystems are found on beaches suggested by an environmental expert
- 4) Show, through a presentation, the information collected during the interviews and the observations of the beaches.
- 5) Proposing solutions for the conservation and protection of marine ecosystems

Target group: tourists , staff X, children: , local public: , students: ,
other target group:

Day Activity: _____
