

Domestic vs. Exotic Pets

If you walk into a pet store, you will see a variety of animals available as options to take home. Circle the animals below that are also found in the wild.

If you circled the animal, that means it is an exotic pet and may have been illegally taken from the wild. Many of the animals shown above may have established breeders, but it is always good to ask about the origin of the animal before you take them home.

Breeders are not always the best option. Research [Project Piaba](#) to find out how these wild-caught fish are better for the environment.
