THE LAST STRAW

WHY YOU SHOULD CARE

500 MILLION straws a day are used in the United States alone - enough straws to wrap around the EARTH 2.5 TIMES every day.

Straws are one of the most common MARINE DEBRIS items in the world and along with other SINGLE-USE PLASTICS are polluting the oceans.

Straws are HARD TO RECYCLE or even transport to landfills because of their size and weight so they often END UP ON BEACHES or in the ocean.

WHAT YOU CAN DO

REDUCE THE AMOUNT of single-use plastic in your household and make ECO-FRIENDLY CHOICES.

REFUSE TO USE straws and ask your local restaurants and businesses to BAN PLASTIC STRAWS or dispense only upon request.

USE ALTERNATIVES to plastic such as paper, stainless steel, glass and bamboo - ENCOURAGE OTHERS to do the same.
