SINGLE-USE PLASTICS

500 MILLION straws a day are used in the United States alone — enough straws to wrap around the **EARTH 2.5 TIMES** every day

Straws are one of the most common **MARINE DEBRIS** items in the world and along with other **SINGLE-USE PLASTICS** are polluting the oceans

Straws are **HARD TO RECYCLE** or even transport to landfills because of their size and weight so they often **END UP ON BEACHES** or in the ocean
